

TII Session 6 – Define Phase

Fitry – Technology Career Discovery and Guidance Platform

Q1. What is your project title?

Fitry – Technology Career Discovery and Guidance Platform

Q2. Who are the main users of your project?

The main users are technology-career beginners, including college students, fresh graduates and self-taught learners who are unsure which technology specialization best matches their skills, interests and preferences.

Q3. What information did you collect from the users?

We collected information about their interests in different technology fields, skills and strengths, career paths they are considering, how they research career options, information sources they use, difficulties and confusion they experience, concerns about making the wrong career choice, and expectations for career guidance.

Q4. What is the main difficulty faced by the users?

The main difficulty is career uncertainty caused by information overload and scattered or conflicting information. Users have many technology career options and information sources, but struggle to determine which career path is personally suitable for them.

Q5. What is the root cause of this difficulty?

The root cause is the lack of structured, personalized and trustworthy career direction. Information is available from many sources, but there is no clear way for beginners to filter, compare and personalize it according to their skills, interests and preferences.

Q6. What assumption did your team make initially?

Initially, our team assumed that technology-career beginners mainly needed more information about different technology careers. We later realized that information is already widely available through search engines, videos, courses, articles and peer advice.

Q7. What did your team understand after analysing the user data?

After analysing the user data, we understood that users do not necessarily lack information. Instead, they have too much fragmented information and struggle to identify what is relevant and suitable for them. We therefore refined our understanding from “lack of career information” to “lack of structured and personalized career direction.”

Q8. Write the final problem statement.

Technology-career beginners need a structured, personalized and trustworthy way to filter and compare the large amount of scattered career information so that they can identify a technology career path that matches their interests, skills and preferences and make confident decisions about what to learn next.
